1. INTRODUCTION

1.1 Purpose

This manual provides the information necessary to repair, calibration, description and download the features of the KE970.

1.2. Regulatory Information

A. Security

Toll fraud, the unauthorized use of telecommunications system by an unauthorized part (for example, persons other than your company's employees, agents, subcontractors, or person working on your company's behalf) can result in substantial additional charges you're your telecommunications services. System users are responsible for the security of own system.

There are may be risks of toll fraud associated with your telecommunications system. System users are responsible for programming and configuring the equipment to prevent unauthorized use. LGE does not warrant that this product is immune from the above case but will prevent unauthorized use of common-carrier telecommunication service of facilities accessed through or connected to it. LGE will not be responsible for any charges that result from such unauthorized use.

B. Incidence of Harm

If a telephone company determines that the equipment provided to customer is faulty and possibly causing harm or interruption in service to the telephone network, it should disconnect telephone service until repair can be done. A telephone company may temporarily disconnect service as long as repair is not done.

C. Changes in Service

A local telephone company may make changes in its communications facilities or procedure. If these changes could reasonably be expected to affect the use of the KE970 or compatibility with the network, the telephone company is required to give advanced written notice to the user, allowing the user to take appropriate steps to maintain telephone service.

D. Maintenance Limitations

Maintenance limitations on the KE970 must be performed only at the LGE or its authorized agents. The user may not make any changes and/or repairs expect as specifically noted in this manual. Therefore, note that unauthorized alterations or repair may affect the regulatory status of the system and may void any remaining warranty.

1. INTRODUCTION

E. Notice of Radiated Emissions

The KE970 complies with rules regarding radiation and radio frequency emission as defined by local regulatory agencies. In accordance with these agencies, you may be required to provide information such as the following to the end user.

F. Pictures

The pictures in this manual are for illustrative purposes only; your actual hardware may look slightly different.

G. Interference and Attenuation

An KE970 may interfere with sensitive laboratory equipment, medical equipment, etc. Interference from un suppressed engines or electric motors may cause problems.

H. Electrostatic Sensitive Devices

ATTENTION

Boards, which contains Electrostatic Sensitive Device(ESD), are indicated by the sign.

Following information is ESD handling: Service personnel should ground themselves by using a wrist strap when exchange system boards.

When repairs are made to a system board, they should spread the floor with anti-static mat which is also grounded. Use a suitable, grounded soldering iron. Keep sensitive parts in these protective packages until these are used. When returning system boards or parts such as EEPROM to the factory, use the protective package as described.

1.3 ABBREVIATION

For the purposes of this manual, following abbreviations apply:

APC	Automatic Power Control
BB	Baseband
BER	Bit Error Ratio
CC-CV	Constant Current - Constant Voltage
CLA	Cigar Lighter Adapter
DAC	Digital to Analog Converter
DCS	Digital Communication System
dBm	dB relative to 1 milli-watt
DSP	Digital Signal Processing
EEPROM	Electrical Erasable Programmable Read-Only Memory
EL	Electroluminescence
ESD	Electrostatic Discharge
FPCB	Flexible Printed Circuit Board
GMSK	Gaussian Minimum Shift Keying
GPIB	General Purpose Interface Bus
GPRS	General Packet Radio Service
GSM	Global System for Mobile Communications
IPIU	International Portable User Identity
IF	Intermediate Frequency
LCD	Liquid Crystal Display
LDO	Low Drop Output
LED	Light Emitting Diode
LGE	LG Electronics

1. INTRODUCTION

OPLL	Offset Phase Locked Loop
PAM	Power Amplifier Module
PCB	Printed Circuit Board
PGA	Programmable Gain Amplifier
PLL	Phase Locked Loop
PSTN	Public Switched Telephone Network
RF	Radio Frequency
RLR	Receiving Loudness Rating
RMS	Root Mean Square
RTC	Real Time Clock
SAW	Surface Acoustic Wave
SIM	Subscriber Identity Module
SLR	Sending Loudness Rating
SRAM	Static Random Access Memory
STMR	Side Tone Masking Rating
TA	Travel Adapter
TDD	Time Division Duplex
TDMA	Time Division Multiple Access
UART	Universal Asynchronous Receiver/Transmitter
VCO	Voltage Controlled Oscillator
VCTCXO	Voltage Control Temperature Compensated Crystal Oscillator
WAP	Wireless Application Protocol

2. PERFORMANCE

2. PERFORMANCE

2.1 H/W Feature

Item	Feature	Comment
Standard Battery	Li-ion, 800mAh	
AVG TCVR Current	280mA	PL5
Standby Current	<2.7mA	@PP9
Talk time	3hours (GSM TX Level 7)	
Standby time	277 hours (Paging Period:9, RSSI: -85dBm)	
Charging time	3 hours	
RX Sensitivity	GSM900 : -105dBm, DCS/PCS : -105dBm	
TX output power	GSM900: 32dBm (Level 5) DCS/PCS: 29dBm (Level 0)	
GPRS compatibility	Class 10	
SIM card type	3V Small	
Display	320 x 240 pixels, 2.2 inch wide, 265K color, TFT	
Status Indicator	Soft icons Key Pad 0 ~ 9, #, *, END/PWR, SEND, CLEAR Key Side Key Up/Down, AF/Camera double action key	
ANT	Built in antenna	
EAR Phone Jack	18pin multi port Headset jack with Remote controller	
PC Synchronization	Yes	
Speech coding	EFR/FR/AMR	
Data and Fax	Yes	
Vibrator	Yes	
Buzzer	No	
Voice Recoding	Yes	
C-Mic	Yes	
Receiver	Yes	
Travel Adapter	Yes	
Options	Bluetooth hands-free kit, Data Kit

3. TECHNICAL BRIEF

3.1. KE970 Component Block diagram.

Figure 1. KE970 Hardware architecture

KE970 is composed with 3 different PCB part such as main PCB, keypad FPCB and slide FPCB.

3. TECHNICAL BRIEF

3.2. Baseband Processor (BBP) Introduction

Figure 2. Top level block diagram of the S-GOLD2™ (PMB8876)

3.2.1 General Description

S-GOLD2™ is a GSM/EDGE single chip mixed signal Baseband IC containing all analog and digital functionality of a cellular radio. Additionally S-GOLD2™ Provides multimedia extensions such as camera, software MIDI, MP3 sound. It is designed as a single chip solution, integrating the digital and mixed signal portions of the base band in 0.13um, 1.5V technology. The chip will fully support the FR, EFR, HR and AMR-NB vocoding. S-GOLD2™ support multi-slot operation modes HSCSD (up to class 10), GPRS for high speed data application (up to class 12) and EGPRS (up to class 12) without additional external hardware.

3.2.2. Block Description

- Processing core

ARM926EJ-S 32 bit processor core for controller functions. The ARM926EJ-S includes an MMU, and the Jazelle Java extension for Java acceleration.

- TEAKLite DSP core

- ARM-Memory

- 32k Byte Boot ROM on the AHB
- 96k Byte SRAM on the AHB, flexibly usable as program or data RAM
- 16k Byte Cache for Program (internal)
- 8k Byte tightly coupled memory for Program(internal)
- 8k Byte Cache for Data(internal)
- 8k Byte tightly coupled memory for Data(internal)

- DSP-Memory

- 104K x 16bit Program ROM
- 8k x 16bit Program RAM
- 60k x 16bit Data ROM
- 37k x 16bit Data RAM
- Incremental Redundancy(IR) Memory of 35904 words of 16bit

- Shared Memory Block

1.5K x 32bit Shared RAM(dual ported) between controller system and TEAKLite.

- Controller Bus system

The processor cores and their peripherals are connected by powerful buses. Multi-layer AHB for connecting the ARM and the other master capable building blocks with the internal and external memories and with the peripheral buses.

- Clock system

The clock system allows widely independent selection of frequencies for the essential parts of the S-GOLD2. Thus power consumption and performance can be optimized for each application.

- Functional Hardware block

- CPU and DSP Timers
- MOVE coprocessor performing motion estimation for video encoding algorithms (H.263, MPEG-4)
- Programmable PLL with additional phase shifters for system clock generation
- GSM Timer Module that off-loads the CPU from radio channel timing
- GMSK / 8-PSK Modulator according to GSM-standard 05.04 (5/2000)
- GMSK Modulator: gauss-filter with $B^*T=0.3$
- EDGE Modulator: 8PSK-modulation with linearized GMSK-Pulse-Filter
- Hardware accelerators for equalizer and channel decoding.
- Incremental Redundancy memory for EDGE class 12 support
- A5/1, A5/2, A5/3 Cipher unit
- GEA1, GEA2, GEA3 Cipher Unit to support GPRS data transmission

3. TECHNICAL BRIEF

- Advanced static and dynamic power management features including TDMA-Frame synchronous low power mode and enhanced CPU modes(idle and sleep modes)
- Pulse Number Modulation output for Automatic Frequency Correction(AFC)
- Serial RF Control interface: support of direct conversion RF
- A Universal Serial Interface(USIF) enabling asynchronous (UART) or synchronous (SPI) serial data transmission
- 1 Serial Synchronous SPI compatible interfaces in the controller domain
- 1 Serial Synchronous SPI compatible interface in the TEAKLite domain
- 2 USART with autobaud detection, hardware flow control and integrated IrDA controller supporting IrDA's SIR standard (up to 115.2Kbps)
- A dedicated Fas IfDA Controller supporting IrDA's SIR,MIR and FIR standards (up to 4Mbps)
- I2C-bus interface (e.g. connection to S/M power)
- A fast display interface supporting serial and parallel interconnection
- An ITU-R BT.656 compatible Camera interface.
- Programmable clock output for a camera
- An multimedia/Secure Digital Card Interface (MMCI/SD:SDIO capable)

3.2.3. External Devices connected to memory interface

Table 1 Memory interface

Device	Name	Maker	Remark
FLASH	PF38F5060M0Y0B0	Intel	Synchronous / A synchronous
SDRAM	PF38F5060M0Y0B0	Intel	Synchronous 104MHz
LCD	IL220DBN1A	LGIT	8bit access 3times transmission
Melody IC	Not Used	S/W	Infineon Software CODEC

3.2.4. RF Interface (T_OUT)

S-Gold2 uses this interface to control RF IC and Peripherals. 13 signals are provided switch on/off RF ICs Periodically each TDMA frame.

Table 2 RF Interface Spec.

T_OUT		
Resource	Interconnection	Description
T_OUT0	TXON_PA	PAM Power on
T_OUT1	VIBRATOR_EN	VBRATOR ON-
T_OUT2	PA_BAND	TX RF band select
T_OUT3	ANT_SW1	FEM control
T_OUT4	ANT_SW2	FEM control
T_OUT5	ANT_SW3	FEM control
T_OUT6	MODE	PAM Mode select

3. TECHNICAL BRIEF

3.2.5. USART Interface

KE970 have two UART Drivers as follow :

- USART1 : Hardware Flow Control / SW upgrade / Calibration
- USART2 : SW debug trace.

Table 3 USART Interface Spec.

USART_0(USART1)		
Resource	Name	Remark
USART0_TXD	TXD_0	Transmit Data
USART0_RXD	RXD_0	Receive Data
USART0_CTS	CTS_0	Clear To Send
USART0_RTS	RTS_0	Request To Send
	DSR	N.C.
USART_1(USART2)		
USART1_TXD	TX_DEBUG	Trace data tx
USART1_RXD	RX_DEBUG	Trace data rx
USART1_CTS	N.C.	N.C.
USART1_RTS	N.C.	N.C.

3.2.6. ADC channel

BBP ADC block is composed of 7 external ADC channel . This block operates charging process and other related process by reading battery voltage and other analog values.

Table 4 S-Gold2 ADC channel usage

ADC channel		
Resource	Interconnection	Description
M0	BATT_TEMP	Battery temperature measure
M1	RF_TEMP	RF block temperature measure
M2	JACK_TYPE	Accessory type detect
M7	H/W VERSION	S-Gold2 H/W version detect
M8	VSUPPLY	Battery supply voltage measure
M9	I_MONITOR	Current consumption measure
M10	REMOTE_ADC	Remote control key detect

3. TECHNICAL BRIEF

3.2.7. GPIO map

Over a hundred allowable resources, KE970 is using as follows except dedicated to SIM and Memory. KE970 GPIO(General Purpose Input/Output) Map, describing application, I/O state, and enable level, is shown in below table.

Table 5 S-Gold2 GPIO pin Map

Port function	KE260 Net Name	Description
KEY MATRIX		
KP_IN0	KP_IN0	Refer to Key Matrix
KP_IN1	KP_IN1	Refer to Key Matrix
KP_IN2	KP_IN2	Refer to Key Matrix
KP_IN3	KP_IN3	Refer to Key Matrix
KP_IN4	KP_IN4	Refer to Key Matrix
KP_IN5	KP_IN5	Refer to Key Matrix
KP_OUT5	KP_OUT5	Refer to Key Matrix
KP_OUT0	KP_OUT0	Refer to Key Matrix
KP_OUT1	KP_OUT1	Refer to Key Matrix
KP_OUT2	KP_OUT2	Refer to Key Matrix
KP_OUT3	KP_OUT3	Refer to Key Matrix
USART_0		
USART0_RXD	RXD_0	UART0, RS232 Data
USART0_TXD	TXD_0	UART0, RS232 Data
USART0_RTS_N	CTS_0	UART0, RS232 RTS
USART0_CTS_N	RTS_0	UART0, RS232 CTS
CC1CC6IO	FM_INT	For FM Radio Interrupt
USART_1		
USART1_RXD	TX_DEBUG	For debugging
USART1_TXD	RX_DEBUG	For debugging
USART1_RTS_N	Not Use

3.3. Power management IC

3.3.1. General Description

SM-POWER is a highly integrated Power and Battery Management IC for mobile handsets. It has been specially designed for usage with S-Gold2. Although optimized for usage with the Infineon S-GOLD baseband device it is suitable for the S-GOLDlite and the E-GOLD+ baseband devices as well. It also supports the cellular RF devices like SMARTi-DC, SMARTi-DC+, SMARTi-SD and the Bluemoon Single, Infineon's single chip solution for Bluetooth. If used with S-GOLD2 it provides all power supply functions (except for the RF PA) for a complete advanced GSM Edge smart phone minimizing external device count.

Block Description

- Highly efficient step-down converter for main digital baseband supply including Core, DSP and memory interface (External Bus Unit).
- Support of S-GOLD standby power-down concept
- Low-drop-out (LDO) regulators for Flash and mobile RAM memory devices
- Voltage independent switching of two SIM cards
- LDO regulators for baseband I/O supply
- LDO regulator for analog mixed-signal section of S-GOLD
- Low-noise LDO regulators for RF devices
- Supply for Bluemoon Single, Infineon's single chip solution for Bluetooth
- Audio amplifier 8 Ohms for handsfree operation and ringing
- Charge Control for charging Li-Ion/Polymer batteries under software control
- Pre-charge current generator with selectable current level
- RTC regulator with ultra-low quiescent current
- USB interface support for peripheral and mini-host mode
- Backlight LEDs driver with current selection and PWM dimming function
- Two single LED driver outputs for signaling
- Vibrator driver with adjustable voltage
- Fully controllable by software via I2C - Bus
- Temperature and battery voltage sensors
- Interrupt channels for peripherals
- System debug mode
- VQFN 48 package with heat sink and non-protruding leads
- Compatible with the Infineon E-GOLD+ V2 and V3

3. TECHNICAL BRIEF

Figure 3 Top level block diagram of the SM-Power(PMB6812)

SM-POWER is a further step on the successful E-Power product line with enhanced and optimized functionality. SM-POWER features a baseband supply concept with a DC/DC step-down converter (SDBB) cascaded by two linear regulators (LBB1/2)

- SM-POWER's DC/DC converter makes up to 40 % reduction of battery current for smart phone functions (e.g. organizer functions, games, MP3 decoding) possible.
- SDBB has high efficiency up to 95% and also a power save mode.
- Memory Interface is directly supported by the SDBB
- SDBB can also act as main supply voltage for E-GOLD+ or S-GOLDlite baseband devices.
- For S-GOLD two linear regulators for DSP and Core are cascaded after the SDBB.

3. TECHNICAL BRIEF

SM-POWER supports the standby power-down concept of S-GOLD by temporarily switching off the linear regulator LBB1 for the DSP during mobile standby whenever this subsystem is not used. In this phase the ARM controller and most peripherals including parts of the on-chip SRAM are kept powered-up with power being supplied by the other linear regulator LBB2.

SM-POWER includes a fully differential audio amplifier able to drive loads down to a nominal value of 8 Ohm for usage in hands-free phones and for ringing

- 400 mW maximum output power
- adjustable gain
- mute switch
- click and pop - protection

SM-POWER also integrates a charging function for Li-Ion, Li-Polymer batteries

- Precharge current source with two current levels
- Constant current / constant voltage charging with 3 different termination voltages
- Programable charge current limitation for use with different batteries
- Freely programmable pulse charging to reduce the thermal power dissipation in the constant voltage charging phase
- Top-off charge current sensing

SM-POWER completes the USB interface of S-GOLD

- Regulated voltage for S-GOLD USB interface including reverse current and overvoltage protection
- Switch to supply USB pull-up resistor
- Mini-host pull down resistor functionality
- Charge pump with internal switching capacitor for USB host VBUS supply voltage

SM-POWER fully supports LED and Vibra Motor functionality

- no external components needed
- driver for backlight LEDs adjustable in steps up to 140mA and with soft turn on and off by PWM dimming
- two driver outputs for single LEDs for precharge indication and signaling with i.e. change of colour
- driver for Vibra Motor with adjustable voltages, soft startup / shutdown and current limitation

SM-POWER offers several control functions

- Power-on Reset Generator with logic state machine
- I2C bus interface
- I2C bus configurable mode control logic with ON (push-button or RTC), VCXOEN and LRF3EN (wake-up by Bluetooth) inputs
- Programmable interrupt channels to handle peripherals like SIM, MMC and USB
- Monitoring of charging functions
- Undervoltage Shut-Down
- Errorflags (volatile or non-volatile) from many power-supply functions and thermal sensor in order to debug system
- Overtemperature Shut-Down
- Overtemperature Warning
- Support of S-GOLD standby power-down concept
- Support of S-GOLD Power-Down Pad Tristate Function

3. TECHNICAL BRIEF

Table 6 LDO Output Table of SM-Power

LDO	Net name	Output Voltage	Output Current	Usage
SDBB	1V8_MEM	1.8V	850mA	Memory & for LDO
LRFC	1V5_RF	1.5V	120mA	RF transceiver
LBB1	1V5_DSP	1.5V	170mA	DSP in BBP

Figure 4 Power domain block diagram of KE970

3. TECHNICAL BRIEF

PMIC & Li-ion CHARGER

Figure 5 SM-Power circuit diagram with charging part

3.3.2. Charging

SM-POWER provides together with an external p-channel FET Siliconix Si3455 an external AC-adapter a complete charge control function for charging of Li-Ion or Li-Ion-Polymer batteries. Either a 1-cell Li-Ion or Li-Ion-Polymer battery with 4.1, 4.2 or 4.4 Volts may be used.

Figure 6 Battery Block Indication

1. Charging method : CC-CV
2. Charger detect voltage : 4.0V
3. Charging time : 3h
4. Charging current : 500mA
5. CV voltage : 4.2V
6. Cutoff current : 100mA
7. Full charge indication current (icon stop current) : 100mA

8. Recharge voltage : 4.00V
9. Low battery alarm
 - a. Idle : 3.50V~3.35V
 - b. Dedicated : 3.59V~3.35V
10. Low battery alarm interval
 - a. Idle : 3min
 - b. Dedicated:1min
11. Switch-off voltage : 3.35V
12. Charging temperature adc range
 - a. $\sim -5^{\circ}\text{C}$: low charging voltage operation (3.6V ~ 3.9V) .
 - b. $-5^{\circ}\text{C} \sim 50^{\circ}\text{C}$: standard charging (up to 4.2 V)
 - c. $50^{\circ}\text{C} \sim$: low charging voltage operation (3.6V ~ 3.9V)

3.4. Power ON/OFF

KE970 Power State : Defined 3cases as follow

- ▶ Power-ON : Power key detect (SM-Power's ON port)
- ▶ Power-ON-charging : Charger detect.
- ▶ Power-ON-remote : remote power on detect (Factory use only)

Figure 7 Power on application.

3. TECHNICAL BRIEF

Input ON is a power-on input for SM-POWER with 2 active high levels (see Figure 8). It might be triggered by a push button or by the RTCOUT output of the S-GOLD device as well. To detect if the push-button is pressed during system operation the logical level at pin ON or its change (if Bit 1 EION in INTCTRL2 is asserted) is recorded in bit LON of the ISF register. If the high level of voltage at pin ON does not reach VIHdet ($V_{bat}-0.8 \sim V_{bat}-0.3$) the above-mentioned bit won't be set.

To support Remote power on function for factory mass production, applied an analog switch as following figure. As monitoring the RPWRON(GPIO_110) and Key matrix KP_OUT(1) & KP_IN(5), KE970 system recognize whether remote power on or End-key pushed

Figure8 Remote power on and End-key power on circuit

3.5. SIM interface

KE970 supports 3V plug in SIM, SIM interface scheme is shown in (Figure 10).

SIM_IO, SIM_CLK, SIM_RST ports are used to communicate with BBP(S-Gold2) and the SIM power supply enabled by BBP (_SIM_EN).

SIM Interface

SIM_CLK : SIM card reference clock

SIM_RST : SIM card Async /sync reset

SIM_IO : SIM card bidirectional reset

Figure 9 SIM CARD Interface

3. TECHNICAL BRIEF

3.6. Memory

512Mbit Flash & 256Mbit SDRAM employed on KE970 with 16 bit parallel data bus thru ADD(0) ~ ADD(24). The 512Mbit Sibley Wireless Flash memory with LPDDR4 stacked device family offers multiple high-performance solutions. The Sibley flash die is manufactured on 90 nm process technology.

It delivers 108 MHz synchronous burst and page-mode read rates with supports multi-partitioning with Read-While-Write (RWW) or Read-While-Erase (RWE) dual operations. The LPDDR4 is a high-performance volatile memory operating at speeds up to 104 MHz with configurable burst lengths.

Figure 10 Flash memory & SDRAM MCP circuit diagram

3.7. LCD Display

LCD module include:

- LCD : 320*240 265K Color TFT LCD
- Backlight : 5 piece of white LED illumination

LCD module is connected to main board thru 35 pins connector.

LCD FPC Interface Spec:

3. TECHNICAL BRIEF

3.8. Keypad Switching & Scanning

The keypad interface is a peripheral which can be used for scanning keypads up to 6 rows (outputs from Port Control Logic) and 6 columns (inputs to PCL). The number of rows and columns depend on settings of the PCL.

Figure 11 KEY FPCB part numeric key matrix

3. TECHNICAL BRIEF

Figure 12 LCD PCB part Navi & Scroll key matrix

Most of numeric keys are located on the Keypad FPCB, Scroll key for menu navigation is on the LCD FPCB, and Power on (End key), BGM hot key, Camera shutter and volume up & down keys are connected via 70pin board to board connector between main PCB and Keypad FPCB.

3. TECHNICAL BRIEF

3.9. Keypad back-light illumination

There are 2 snow white color LEDs on the KEY FPCB for keypad illumination. Keypad Back-light is controlled by SM-Power LED port which has constant current control function.
The whole configuration of the SM-POWER LED drivers is shown in below Figure16.

Figure 13 Keypad Back-light LEDs

Figure 14 Keypad Back-light LEDs

3.10. LCD back light illumination

The MAX8645Y charge pump drives up to 6 white LEDs in the main display for backlighting and up to 2 white LEDs for flash, all with regulated constant current for uniform intensity. By utilizing adaptive 1x/1.5x/2x charge pump modes and very-low-dropout current regulators, it achieves high efficiency over the 1-cell lithium-battery input voltage range. 1MHz fixed-frequency switching allows for tiny external components and low input ripple. Two on-board 200mA programmable output voltage LDOs are provided to meet camera module requirements.

Figure 15 LCD Back light unit and Flash LED charge pump IC

For more dimming flexibility or to reduce the number of control traces, the MAX8645Y supports serial pulse dimming. Connect ENM1 and ENM2 together to enable single-wire pulse dimming of the main LEDs (or ENF only for single-wire pulse dimming of the Flash LEDs). When ENM1 and ENM2 (or ENF) go high simultaneously, the main (or flash) LEDs are enabled at full brightness. Each subsequent low-going pulse (500ns to 250· \bar{I} s pulse width) reduces the LED current by 3.125% (1/32), so after one pulse the LED current is 96.9% (or 31/32) * I_{LED} . The 31st pulse reduces the current to 0.03125 x I_{LED} . The 32nd pulse sets the LED current back to I_{LED} . Figure 1 shows a timing diagram for single-wire pulse dimming.

Because soft-start is longer than the intitial tHI, apply dimming pulses quickly upon startup (after initial tHI) to avoid LED current transitioning through full brightness.

3. TECHNICAL BRIEF

Figure 16 Seiral pulse dimming timing diagram

Setting the Main Output Current

SETM controls M1-M6 regulation current. Current flowing into M1, M2, M3, M4, M5, and M6 is a multiple of the current flowing out of SETM.

$$I_{M1} = I_{M2} = I_{M3} = I_{M4} = I_{M5} = I_{M6} = K * (0.6V / R_{SETM}) = 18.4mA$$

where $K = 230$, $R_{SETM} = 7500$

where $K = 23$, 69 , or 230 (depending upon the state of ENM1 and ENM2, see Table 8), and R_{SETM} is the resistor connected between SETM and GND (see the Typical Operating Circuit).

Table 8. ENM1/ENM2 current setting table

ENM1/ENM2 STATES	BRIGHTNESS	M1 - M6 CURRENT
ENM1 = low, ENM2 = low	Shutdown	0
ENM1 = low, ENM2 = high	1/10 Brightness	$23 \times I_{SETM}$
ENM1 = high, ENM2 = low	3/10 Brightness	$69 \times I_{SETM}$
ENM1 = high, ENM2 = high	Full Brightness	$230 \times I_{SETM}$

Setting the Flash Output Current

SETF controls the F1-F2 regulation current. Current flowing into F1 and F2 is a multiple of the current flowing out of SETF.

$$I_{F1} = I_{F2} = N * (0.6V / R_{SETF}) = 162mA$$

where $N = 1380$, $R_{SETF} = 5100$

3.11 Battery current consumption monitor

KE970 use a current monitoring function to calculate the battery capacity and the remaining time, as monitoring current flow from the battery thru 47mohm resistor.

Figure 17 Current monitor circuit

3.12 JTAG & ETM interface connector

Figure 18 JTAG & ETM(Embedded Trace Module) interface connector

In case of KE970 mass production, the JTAG & ETM interface connector will not be mount on board. That is only for developing and software debugging purpose.

3. TECHNICAL BRIEF

3.13. Audio

KE970 Audio signal flow diagram as following diagram.

Figure 19 Audio signal flow diagram

3.13.1. Audio amplifier sub system IC with 3D effect

Audio amplifier sub system IC is an audio power amplifier capable of delivering 500mW of continuous average power into a mono 8Ω load, 25mW per channel of continuous average power into stereo 32Ω single-ended (SE) loads. The LM4845 features a 32-step digital volume control and eight distinct output modes. The digital volume control, 3D enhancement, and output modes (mono/SE/OCL) are programmed through a two-wire I₂C interface that allows flexibility in routing and mixing audio channels.

Figure 20 Audio amplifier Sub-system IC

Figure 21 Audio signal distribute analog switch

3. TECHNICAL BRIEF

3.13.2. Microphone with gain switching circuit

When a call is established, MICBIAS signal goes up to '2.5V' in the MKE970. PMB8876(S-Gold2) provides both 2.0V and 2.5V for MICBIAS to circuit designer. VA01, VA02 are employed to enhance ESD immunity.

Figure 22 Microphone circuit

3.14. Multi port switch

Multi port switch has employed to decrease MMI(Multi Media Interface) connector's pin number. USB, USART, Remote controlled Headset is connected via this multi port switch. When USB VBUS voltage is detected Multi port 0 and 1 is connected to USB_DP and USB_DM each. If the remote controlled headset is plugged into MMI connector, then multi port 0 and 1 in go through REMOTE_INT and REMOTE_ADC.

Table 9 Multi port switch truth table

Pin7	REMOTE_ADC	RXD	USB_DM

3. TECHNICAL BRIEF

Figure 23 Multi port switch 1

Figure 24 Multi port switch 2

3. TECHNICAL BRIEF

3.15. USB charging circuit

The USB charging circuit is a fully integrated USB VBUS voltage single-cell Li-ion battery charger circuit.

The charger uses a CC/CV charge profile required by Li-ion batteries. CC charging current and End of charging current is programmable I_{REF} & I_{MIN} resistors. I_{REF} resistor between this pin and the GND pin to set the charge current limit determined by the following equation:

$$I_{CC} = 12089/33K = 366mA$$

The End Of Charging current is set by I_{MIN} That can be programmed by the as following equation:

$$I_{EOC} = 11000/220K = 50mA$$

Figure 25 USB charging circuit

Charging indicator LED controlled by two ICs, one is a SM-Power, the other is a ISL6294. When TA(Travel Charger) is plugged in to MMI connector, the LD100 controlled by SM-Power both power off case and power on case. When USB cable is connected via MMI connector, indicator LED is controlled by ISL6294 in power off case and by SM-Power in power on case.

3.16. BLUETOOTH

Figure 26 BLUETOOTH Functional block diagram.

3. TECHNICAL BRIEF

3.16.1. General Features

- Single Chip Bluetooth device for cellular applications integrating radio, baseband and memory
- Fabricated in advanced low power 0.13µm CMOS technology
- Very low component count (6 external components)
- Ultra low power design
 - Peak current 40mA for basic data rate
 - Peak current 45mA for enhanced data rate
 - Bluetooth low power mode typ. 25µA
- Multiple input clock signals supported (10-40MHz)
- Supply from external voltage regulator 1.8V..3.6V 1)
- Autonomous power down scenarios of Bluetooth and cellular system supported
- Packages:
 - P-VQFN-48 package
 - P-WFLGA-56 package
- Temperature range from -40°C up to 85°C
- Boundary scan for interface lines via JTAG

3.16.2 Micro-Controller-Section

- ARM7TDMI-STM ARM® Processor for protocol and application software
- Timers + Watchdog + Interrupt Module

3.16.3 Micro-Controller Memory

- 32 KByte RAM
- 256 KByte read only Program Memory
- 8 KByte Patch RAM

3.16.4 Interfaces

- UART (Bluetooth - Interface, support for HCI UART and Three-Wire UART transport layers with/without hardware handshaking) up to 3.25MBaud
- Two channel PCM Audio interface with I2S mode
- I2C Interface
- Three channel full duplex CVSD trans coder
- General Purpose I/Os
 - External interrupt
 - Port output levels available during low-power mode (VDD supplied)
- Separate voltage domains for GPIO, UART and PCM interfaces
- Control signal for requesting external (cellular) system clock
- Multi frequency (e.g. 32.768 kHz) low power clock input

3.16.5. RF-Section

- Integrated antenna switch to minimize external components count
- Programmable RF transmit power between -55dBm...+6dBm
 - Fine tuning in 2dB programmable steps also supported
- 20dBm power class 1 supported with external power amplifier
 - Separate TX output interface to PA (bypass of internal T/R switch)
 - Digital power step control
- Receiver sensitivity typ. -90dBm
- High performance integrated LNA with excellent blocking and inter modulation performance
- Low-IF receiver topology eliminates external IF filters
- Digital demodulation for optimum sensitivity and co- / adjacent channel performance
 - Digital offset compensation, symbol and frame synchronization
- RSSI information for power control

3. TECHNICAL BRIEF

3.16.6 System Integration

Figure 27 Mobile system integraton

The UART (serial interface) is used for the software interface between S-Gold2 baseband and the Bluetooth chip. For the HCI UART transport layer four interface lines are needed, two for data (UARTTXD and UARTRXD) and two for hardware flow control (UARTRTS and UARTCTS). For the HCI Three-Wire UART transport layer two interface lines (UARTTXD and UARTRXD) are needed. The hardware flow control lines (UARTRTS and UARTCTS) are supported but the use is optional. In KE970 used three-wire UART communication.

The UART interface has its own supply voltage (VDDUART) to ensure compatibility with the I/O voltages used by the S-Gold2.

The PCM/I2S interface is used as audio interface and can handle up to two voice channels. The PCM interface also has its own supply voltage (VDDPCM) to ensure compatibility with the I/O voltages used by the S-Gold2 baseband processor.

3. TECHNICAL BRIEF

Figure 28 Bluetooth circuit

3.17. Micro SD external memory card slot

The TransFlash Memory Module has eight exposed contacts on one side. The S-Gold2 is connected to the module using a dedicated eight-pin connector

Figure 32 MMI 18pin connector circuit

RF circuit technical brief

3.19. General Description

The RF transceiver (PMB 6272 SMARTi-PM) is an integrated single chip, quad-band transceiver for GSM850/GSM900/GSM1800/GSM1900 designed for voice and data transfer applications. The transceiver provides an analog I/Q baseband interface and consists of a direct conversion receiver and a quad-band polar transmitter for GSM and EDGE with integrated PGA functionality. Further on a completely integrated SD-synthesizer with HSCSD and GPRS/EDGE capability, a digitally controlled reference oscillator with three outputs, a fully integrated quad-band RF oscillator and a three wire bus interface with all necessary control circuits complete the transceiver.

Figure 33 RF transceiver PMB7262 SMARTi-PM functional block diagram

3. TECHNICAL BRIEF

Figure 34 RF transceiver PMB7262 SMARTi-PM schematic

3.20. Receiver part

Figure 35 Receiver part block diagram

The constant gain direct conversion receiver contains all active circuits for a complete receiver chain for GSM/GPRS/EDGE (see Figure 39). The GSM850/900/DCS1800/ PCS1900 LNAs with balanced inputs are fully integrated. No inter-stage filtering is needed. The orthogonal LO signals are generated by a divider-by-four for GSM850/900 band and a divider-by-two for the DCS1800/PCS1900 band. Down conversion to baseband domain is performed by low/high band quadrature direct down conversion mixers. The baseband chain contains a LNB (low noise buffer), channel filter, output buffer and DC-offset compensation. The 3rd order low pass filter is fully integrated and provides sufficient suppression of blocking signals as well as adjacent channel interferers and avoids anti-aliasing through the baseband ADC. The receive path is fully differential to suppress on-chip interferences. Several gain steps are implemented to cope with the dynamic range of the input signals. Depending on the baseband ADC dynamic range, single- or multiple gain step switching schemes are applicable. Furthermore an automatic DC-offset compensation can be used (depending on the gain setting) to reduce the DC-offset at baseband-output. A programmable gain correction can be applied to correct for front end- and receiver gain tolerances.

3. TECHNICAL BRIEF

3.21. Transmitter part

The GMSK transmitter supports power class 4 for GSM850 and GSM900 as well as power class 1 for DCS1800 and PCS1900. The digital transmitter architecture is based on a very low power fractional-N Sigma-Delta synthesizer without any external components (see Figure39). The analog I/Q modulation data from the baseband is converted to digital, filtered and transformed to polar coordinates. The phase/frequency signal is further on processed by the Sigma-Delta modulation loop. The output of its associated VCO is divided by four or two, respectively, and connected via an output buffer to the appropriate single ended output pin. This configuration ensures minimum noise level. The 8PSK transmitter supports power class E2 for GSM850 and GSM900 as well as for DCS1800 and PCS1900. The digital transmitter architecture is based on a polar modulation architecture, where the analog modulation data (rectangular I/Q coordinates) is converted to digital data stream and is subsequently transformed to polar coordinates by means of a CORDIC algorithm. The resulting amplitude information is fed into a digital multiplier for power ramping and level control. The ready processed amplitude signal is applied to a DAC followed by a low pass filter which reconstructs the analog amplitude information. The phase signal from the CORDIC is applied to the Sigma-Delta fractional-N modulation loop. The divided output of its associated VCO is fed to a highly linear amplitude modulator, recombining amplitude and phase information. The output of the amplitude modulator is connected to a single ended output RF PGA for digitally setting the wanted transmit power. The PA interface of SMARTi-PM supports direct control of standard dual mode power amplifiers (PA's) which usually have a power control input VAPC and an optional bias

Figure 36 Transmitter part block diagram

control pin VBIAS for efficiency enhancement. In GMSK mode, the PA is in saturated high efficiency mode and is controlled via its VAPC pin directly by the baseband ramping DAC. In this way both up- / down-ramping and output power level are set. In 8PSK mode, the ramping functionality is assured by an on-chip ramping generator, whereas output power is controlled by the PGA's as described above.

3.22. RF synthesizer

The transceiver contains a fractional-N sigma-delta synthesizer for the frequency synthesis in the RX operation mode. For TX operation mode the fractional-N sigma-delta synthesizer is used as Sigma-Delta modulation loop to process the phase/frequency signal. The 26MHz reference signal is provided by the internal crystal oscillator. This frequency serves as comparison frequency of the phase detector and as clock frequency for all digital circuitry. The divider in the feedback path of the synthesizer is carried out as a multi-modulus divider (MMD). The loop filter is fully integrated and the loop bandwidth is about 100 kHz to allow the transfer of the phase modulation. The loop bandwidth is automatically adjusted prior to each slot (OLGA²). To overcome the statistical spread of the loop filter element values an automatic loop filter adjustment (ALFA) is performed before each synthesizer startup. The fully integrated quad-band VCO is designed for the four GSM bands (850, 900, 1800, 1900 MHz) and operates at double or four times transmit or receive frequency. To cover the wide frequency range the VCO is automatically aligned by a binary automatic band selection (BABS) before each synthesizer startup.

3.23. TCXO

The transceiver contains a fully integrated 26MHz temperature compensated controlled crystal oscillator (DCXO) with three outputs for the system clock, one output for the GSM baseband and two additional for other subsystems (GPS, Bluetooth, etc.). The only external part of the oscillator is the crystal itself. The overall pulling range of the TCXO consists of eight subranges. The subrange closest to the '0ppm' at the middle AFC-value is selected during the calibration process in the mobile's production and is used for the rest of the lifetime. The frequency tuning is performed along the selected subrange by programming the frequency control word (XO_TUNE) via the three wire bus ("3Wbus").

3. TECHNICAL BRIEF

3.24. Front End Module control

Implemented in the Transceiver are two outputs for direct control of front end modules with two logic input pins to select RX- and TX-mode as well as low- and high band operation.

6. Download & S/W upgrade

6. Download & S/W upgrade

6.1 S/W download setup

Preparation

- Target terminal
- PIF-Union
- RS-232 Cable and PIF-UNION to Phone interface Cable
- Power Supply or Battery
- IBM compatible PC supporting RS-232 with Windows 98 or newer.

If you are going to use battery, the voltage of the battery should be over 3.7V for stable power supplying during S/W download.

6.2 Download program user guide

Execute Flashtool program, then below window will be appeared.
Click the OK button

6. Download & S/W upgrade

When the application is started first time the following screen appears.
Each section is described in the text below.

Click the check box to enable or disable file download.

Click on the blue text to select the file to download.

This will open a normal file select box. Select the wanted file.

6. Download & S/W upgrade

Click on the blue text to select the COM port.

6. Download & S/W upgrade

Click on the blue text to select the Baud rate.

Click OK button to next step.

6. Download & S/W upgrade

Will change the window as below

Click to anywhere on the control panel to start download.

Can see the "Reset the phone/module" then remote power on the target phone

6. Download & S/W upgrade

During download, the screen will look something like this:

The blue bar shows the download progress. The FLS filename and the expected checksum are shown. The download statistics are shown. Click "Reset" to reset the counters.

After download, the status is shown.

6. Download & S/W upgrade

If there is a need to stop the download process, click on the panel for the channel to be stopped.

To stop the download the panel must be clicked twice.

This is to avoid that the download is stopped accidentally.

Furthermore, to avoid that the download is stopped on a mouse double-click, there must be at least 0.5 second between the two clicks.

If the panel is clicked only once, the text "Click again to stop" will disappear and the download will continue.

If a valid second click is detected, the download process is stopped and the progress bar turns yellow.
At this point the download can be started from the beginning as usually.

NOTE: That the download statistic is unaffected when the download is stopped manually.

6. Download & S/W upgrade

9. RF Calibration

9.1 Test Equipment Setup

9.2 Calibration Steps

9.2.1. Turn on the Phone.

9.2.2. Execute “HK_24.exe”

9. RF Calibration

9.2.3. Click “SETTING” Menu

9.2.4. Setup “Ezlooks” menu such as the following figure

9. RF Calibration

9.2.5. Setup “Line System” menu such as the following figure

9.2.6. Setup Logic operation such as the following figure.

9. RF Calibration

9.2.7. Select “MODEL”.

9.2.8. Click “START” for RF calibration

9.2.9. RF Calibration finishes.

9.2.10. Calibration data will be saved to the following folder.

6. Download & S/W upgrade

Notices:

1. The state of Phone is “ test mode “ during the CALIBRATION.
2. Calibration program automatically changes either “normal mode” or “ptest mode”.
3. RF Calibration steps as follow:

TX Channel compensation: EGSM->DCS->PCS->EDGE EGSM->EDGE DCS->EDGE PCS

RX Channel compensation: EGSM->DCS->PCS

4. Phone Operation Mode

10. Stand along

10.1. Test Program Setting

- ① Set COM Port.
- ② Check PC Baud rate.
- ③ Confirm EEPROM & Delta file prefix name.

- ④ Click "Update Info" for communicating Phone and Test -Program.

10. Stand alone

- ⑤ For the purpose of the Standalone Test, Change the Phone to “ptest mode” and then Click the “Reset” bar.
- ⑥ Select “Non signaling” in the Quick Bar menu. Then Standalone Test setup is finished.

10. Stand alone

10.2. Tx Test

- ① Click “Non signaling mode” bar and then confirm “OK” text in the command line.

- ② Put the number of TX Channel in the ARFCN.
 ③ Select “Tx” in the RF mode menu and “PCL” in the PA Level menu.
 ④ Finally, Click “Write All” bar and try the efficiency test of Phone.

10. Stand along

10.3. Rx Test

- ① Put the number of RX Channel in the ARFCN.
- ② Select “Rx” in the RF mode menu.
- ③ Finally, Click “Write All” bar and try the efficiency test of Phone.

- ④ The Phone must be changed “normal mode” after finishing Test.
- ⑤ Change the Phone to “normal mode” and then Click the “Reset” bar.

11. ENGINEERING MODE

Engineering mode is designed to allow a service man/engineer to view and test the basic functions provided by a handset. The key sequence for switching the engineering mode on is “2945#*#” Select. Pressing END will switch back to non-engineering mode operation. Use Up and Down key to select a menu and press ‘select’ key to progress the test. Pressing back key will switch back to the original test menu.
